AutoCAD is a graphical drafting program for designers, engineers, architects, and construction technicians to create 2D and 3D drawings of mechanical and civil designs, including piping, plumbing, electrical, mechanical, building, and other civil engineering projects. Most of the output from AutoCAD is in the DGN (Drawing Graphics) format, a native format created for AutoCAD. DGN can be read and edited by most other CAD programs (such as SolidWorks, Inventor, Creo, and Vectorworks), and most of these other programs can export DGN into the native format. Most of the 2D drawing commands are named after their functionality; the 3D commands, though, are named after the geometric object they create. These commands are commonly referred to as layers, and the commands for creating those layers are called Layer commands. The sequence of commands will vary by user, but the end result is the same. AutoCAD is a commercial product that requires a subscription, and the software is expensive (starting at approximately \$1,200 per user). At the same time, the resulting product is also very expensive, costing anywhere from \$500 to \$3,500 per year. The software is usually licensed to individuals and companies in various ways. Most people are probably not aware that you can license AutoCAD online through a reseller such as the Online Computer Learning Center (OCLC). AutoCAD 2017 AutoCAD 2019 (currently in beta) AutoCAD is currently undergoing a major revamp. In order to catch up with the other industries, Autodesk has worked with Microsoft on producing a new product. AutoCAD 2019 is currently in Beta and you can get a 30-day trial version, the AutoCAD Enterprise. AutoCAD Architecture This product is aimed at architects, engineers, and contractors. AutoCAD Architecture is designed to allow you to create and work with 3D models quickly, efficiently, and easily. AutoCAD Architecture was first introduced in AutoCAD 2017. It includes a variety of tools and features that allow you to create and work with 3D models quickly and efficiently, for the purposes of visualizing and communicating designs. AutoCAD Architecture contains several "layers". The Layers contain groups of commands, where each command is for a certain geometric purpose. You can use the layers to organize and group the commands that you use
